SUMMARY

Final-year CS undergrad (AI/ML specialization) building scalable full-stack applications with JavaScript/TypeScript, Node.js, and React.js. Experienced designing RESTful APIs, event-driven job pipelines, and WebSocket-based real-time systems on PostgreSQL, MongoDB, and Redis, plus integrating Agentic AI/LLM solutions into production workflows. Comfortable across the stack with Docker, CI/CD, and cloud deployment, and seeking a full-stack or backend engineering role to ship clean, testable, production-grade code from day one.

EDUCATION

JECRC University <i>Bachelor of Technology in Computer Science – AI/ML Specialization</i> CGPA: 7.16	Jaipur, Rajasthan 2023 – 2027
---	----------------------------------

EXPERIENCE

LaVelda Coffee Beans LLP <i>Software Development Intern</i>	Remote Apr 2026 – Jun 2026
- Integrated the Next.js frontend with backend REST APIs (Express.js, Prisma, PostgreSQL) for the storefront, ensuring smooth data flow between both layers. - Participated in code reviews, giving and receiving feedback on code quality, structure, and adherence to best practices throughout the sprint cycle. - Containerized backend services with Docker, ensuring consistent environments across local development, testing, and deployment stages.	

PROJECTS

Planex <i>Next.js, TypeScript, Node.js, PostgreSQL, Redis, BullMQ</i> Live GitHub	Mar 2026 – Present
- Built an Agentic AI-powered project planning platform that generates requirements, DB schemas, API specs, and folder structures from natural language prompts via LLM integration, with Passport.js authentication. - Engineered event-driven, async job pipelines with Redis and BullMQ for concurrent LLM request processing, cutting response latency by 60% at 200 req/min. - Optimized PostgreSQL query performance with Redis caching, reducing redundant query execution time by 40%.	
Quick Split <i>Next.js, Node.js, TypeScript, MongoDB, Express.js, WebSockets</i> Live GitHub	Jan 2026 – Apr 2026
- Engineered a real-time expense management platform with WebSocket-based live updates, flexible splitting modes, and support for 200+ concurrent rooms, secured via NextAuth. - Integrated Groq LLM for AI-powered expense categorization, cutting manual effort by 65%, and exposed results through REST API endpoints. - Built Node.js microservices for anomaly detection and risk prediction, achieving 80% accuracy.	

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, C++
Backend	Node.js, Express.js, REST APIs, WebSockets, Microservices, JWT Auth, BullMQ, Zod
Frontend	React.js, Next.js, Redux, Tailwind CSS, Framer Motion, Responsive Design, HTML, CSS
Databases	PostgreSQL, MongoDB, MongoDB Atlas, MySQL, Redis, Supabase, Prisma
AI/LLM	Agentic AI Workflows, LLM Integration (OpenAI, Groq, Gemini), Prompt Engineering
Cloud & DevOps	Docker, CI/CD, AWS (S3), Git, GitHub, Unit Testing
Core CS	Data Structures & Algorithms, System Design, OOP

CERTIFICATIONS

Machine Learning Specialization <i>Andrew Ng, Coursera</i>	Jan 2026
Node.js – The Complete Guide (REST APIs, GraphQL, MVC) <i>Udemy</i>	Mar 2025
React – The Complete Guide (incl. Next.js, Redux) <i>Udemy</i>	Jan 2025
