Summary

Final-year B.Tech CS (AI/ML) student at JECRC University building backend and full-stack systems in TypeScript, Node.js and Next.js on PostgreSQL, MongoDB and Redis. Shipped LLM, MCP and queue-based features in a 500+ user product and built payment and auth flows during an internship. Seeking an entry-level backend, full-stack or AI engineering role.

Experience

SeaSurf Technologies Pvt. Ltd. Jaipur

AI Full-Stack Developer, Remii | One of two developers, 6 features shipped *Aug 2026 - Present*

- Fixed blank chats after mid-task exits by persisting agent state; the live progress bubble restores on return.
- Built an admin dashboard on a tRPC BFF: user list, error tracking, model usage and analytics.
- Built transactional email with HMAC-signed unsubscribe links, per-category preferences and low-credit alerts.

LaVelda Coffee Beans LLP Remote

Software Development Intern *Apr 2026 - Jun 2026*

- Built Razorpay checkout with server-side price and tax checks and idempotent SHA-256 webhook de-dup.
- Added stock reservation with a cron job releasing expired holds, closing the oversell window.
- Built auth with jose JWTs, bcryptjs hashing, HttpOnly cookies and customer/admin role guards.

Projects

Planex Mar 2026 - Jun 2026

Next.js, TypeScript, Express, PostgreSQL, Prisma, Redis, BullMQ, Groq, Gemini Live | GitHub

- Built a 4-stage LLM pipeline (Groq, Gemini) for requirements, DB schema, API spec and folders; Zod-validated.
- Moved generation into Redis-backed BullMQ workers; the API returns a job ID instead of blocking the request.
- Added a two-tier Redis cache: 10-min TTL on generated stage outputs, 24h on section reads with write-through.

Quick Split Jan 2026 - Apr 2026

Next.js, TypeScript, Node.js, MongoDB, WebSockets, FastAPI, Groq Live | GitHub

- Built a real-time expense-splitting app: members join rooms via NextAuth and balances update live over WebSockets.
- Used Groq to turn plain-language messages into expense splits via a REST endpoint with flexible split modes.
- Served anomaly detection (AUC 0.71) and settlement risk (AUC 0.69) models via FastAPI, both k-fold validated.

Technical Skills

Languages/Frontend: TypeScript, JavaScript, Python, C++, React, Next.js, Redux, Tailwind CSS, HTML/CSS
Backend: Node.js, Express.js, tRPC, Next.js Server Actions, FastAPI, REST APIs, WebSockets, BullMQ, OAuth, JWT (jose), Passport.js, Zod, Razorpay, Resend
Databases: PostgreSQL, pgvector, MongoDB, Redis, Prisma ORM, SQL
Cloud/DevOps: Docker, CI/CD, AWS (S3), Git, GitHub
AI/LLM: LLM integration (Groq, Gemini, OpenAI), MCP, Composio, prompt engineering, machine learning

Education

JECRC University Jaipur, Rajasthan

B.Tech in Computer Science, AI/ML Specialization *2023 - 2027*

Certifications

Machine Learning Specialization - Andrew Ng, Coursera Jan 2026
Node.js - The Complete Guide (REST APIs, GraphQL, MVC) - Udemy Mar 2025
